

Turnbull Wildlife Refuge

Friends Newsletter

Friends of Turnbull Board Work - Spring Quarter

The FOT Board reviewed reports from the Spring Activities; an update on the status of the Rabe Trust of which we are a recipient of a real estate property in Spokane; and the annual Membership campaign, and finally the update from the Nature Store operation at its monthly meetings (April, May and June).

The Activities Committee: Three sessions of the Beginning Bird Watching Classes on the first Saturdays of April, May and June were led by Joyce Alonso. While all three sessions were fully registered through Eventbrite, not everyone showed up. Those who did come had a very good experience, first learning what to look for, and then getting out on the Refuge trails with Joyce as guide.

The Friends had a successful booth at MayFest in downtown Cheney on May 12. Thanks to Molly Zammit, Nancy Curry, Lorna Kropp, Debbie Davis and Olesia Letts for taking a shift to engage the crowd in a Bird Migration game.

The Rabe Trust Update - In November of 2014, the Board was notified of Friends of Turnbull inclusion in the Trust of a generous friend of the Refuge, Kevin Rabe. Our organization was given a house in north Spokane among the several properties in Spokane included in the Trust. There were several properties in Spokane included. Recently the Board had received communications from other recipients who were dissatisfied with the progress of the completion of the Trust and suggested joining in a petition by additional lawyers to change the Trustee. After consideration, the FOT Board decided to continue to wait and not expend funds to engage a lawyer on our behalf at this time. Some improvements in the Trustee procedures were achieved by their petitions.

The June Membership month campaign renewal letters were sent out by the team of John Barber, Olesia Letts and Lorna Kropp. Thanks to all who responded. Olesia has agreed to volunteer to keep the FOT membership records and will be acknowledging your reply soon. Thanks, Olesia!!

My goodness! Has it been three months since the last newsletter. How time flies when you're having fun, my husband used to say.

Here we are into July and the Nature Store is doing well. Our sales have been pretty steady each weekend. With our onsite volunteer, Deanna, we have had some very good midweek sales as well. The store has also been open extra hours to accommodate folks who have been attending special events at the refuge. A special thanks to them for their taking the time to check out the store and make some special purchases.

Our sales have been so good I have had to make some fill-in orders for Audubon bird toys, jewelry, books, hats, and both short and long- sleeve t shirts. I added a temporary roll rack for long-sleeve t shirts and the sales really jumped up. By also filling in the blanks on the styles and colors of all the shirts there have been increased sales there as well. At this rate of sales I may need to make another order of books. Am I complaining? Definitely not!!!

I keep trying to figure out ways to make additional space for some new items. I am hoping to add one more new fixture before the season is over. Oh yes, I forgot to mention that the large cups have been reordered. They should be in soon. I am looking for some new pictures to place on an order of small cups. All you photographers out there might consider submitting a picture or two for me to consider. Our customers like that we use local artists and local pictures.

A special shout out for all our volunteers who have made a special effort to learn the new cashiering system. Some of you have even come in extra times to make sure you are comfortable with it all. I applaud you for your dedication.

I thank everyone for their support this year.

Wildlife Observations

Mike Rule

Big surprise Tuesday, 7/17. We had thought that neither trumpeter swan pair had nested this year. The biological field crew observed a pair with 2 very young cygnets on Cheever Lake. Sandy and I viewed the lake from several vantage points the next day, looking for the nest, but it is well hidden. We did scare up a cow moose with 2 calves and ran into another pair of calves walking west of the lake

Duck and grebe young abound in many wetlands. A recent trip to Cheever Lake found dozens of mallard, gadwall, redhead, teal and pied-billed grebe broods.

Shorebirds are starting their southern migration through the area. Recently long-billed dowitchers, lesser yellow-legs and Wilson's phalaropes were seen on exposed mudflats in Middle Pine Lake by Sandy Rancourt. Increasing numbers can be seen through August. Stubblefield will be a hot spot as it is holding water much later than we have seen lately. American white pelicans are also regulars thanks to an invasion of tench, a non-native fish species.

A new Biological position for the Refuge's Invasive Species Early Detection Rapid Response Program, beginning Fall of 2018-Summer of 2019, is open. This Biological position will work with Mile Rule and the Cooperative Weed Management Area project to improve wildlife habitats on adjacent lands using GPS equipment, weed survey software and volunteers surveying over 1000 acres for weed occurrences (yellow star thistle, knapweeds and leafy spurge). The Friends will be a fiscal agent for the grant planned by Mike Rule.

Friends of Turnbull Annual Meeting – August 14, 2018, 6-8 pm Mark your Calendars now!!

The Annual Meeting is a chance for members to come together, hear about the work of our organization from this past year, and hear the presentation about Turnbull Swans by Carlene Hardt, a local wildlife photographer! You can find Carlene's work in the Nature Store. We carry post cards and bookmarks with her photographs, in addition to a DVD of her presentation - "Elegance and Wonder" – an intimate look at the life of the locally famous swan named Solo, his mate, and the joys of their cygnets coming of age.

Put the date on your calendar now, and plan to come. The Friends Board will be providing grilled hot dogs and hamburgers and buns for dinner and drinks, and you are asked to bring along either a salad or dessert to share. The schedule for the evening will be:

- 6:00 pm Potluck dinner from the grill with salads and dessert to share
- 6:45 pm Brief Annual Meeting with reports and election of new Board Members
- 7:00 pm "Elegance and Wonder" program combining photos and videos by Carlene Hardt about the life of the locally famous swan named Solo, his mate, and the joys of their cygnets coming of age.

Friends of Turnbull NWR Annual Meeting

Tuesday, August 14, 2018

6:00 PM Potluck supper:
bring a salad or dessert to share,
we'll be grilling hamburgers and hotdogs!

Close Encounters of the Feathery Kind

by Carlene Hardt

I was out again at Turnbull recently and saw a singing red wing blackbird, a variety of ducks and this CUTE family of Canada Geese. I know that Canada Geese are common but the goslings are so adorable! They were in the water and I saw they were coming up to the walkway. I inched my way closer as I saw the goslings grazing. The grazing and seeing their whole little bodies was different so I ended up being very close to them and they did not seem disturbed by it.

Where I was did not allow me to back up from them, and I soon began to realize that I was TOO close. I began to wonder if the adult goose keeping an eye on me might attack. The goose never hissed or came closer so I stood and took pictures WITHOUT MOVING for 30 minutes until they went back into the water and away from me. It took a few minutes for my legs to work again because I had locked my knees. When I got home, I decided to research about the possibility of them attacking me and I see that the potential was there! Whew, they tolerated me. I will not get that close again!

Canada Geese facts:

They feed on a very wide variety of plants. Canada Geese live in a great many habitats near water, grassy fields, and grain fields. They are particularly drawn to lawns for two reasons: they can digest grass, and when they are feeding with their young, manicured lawns give them a wide, unobstructed view of any approaching predators. They mate for life. Young often remain with their parents for their entire first year.

When they are nesting or have goslings running about they become extremely aggressive if they think they are being threatened. Walk too close to their territory and they will charge or they will just hiss and flap their wings. You can stop a goose's aggression by respectfully leaving its territory. Back away slowly, while remaining calm.

Friends Training Workshop, Medford, Oregon

The US Fish and Wildlife Service held a special training conference for invited guests from twelve Friends organizations associated with National Wildlife Refuges (NWR) and National Fish Hatcheries (NFH). These refuges and hatcheries covered the Pacific and Pacific Southwest Regions, including Hart Mountain and Malheur in Oregon; Coleman, San Francisco Bay, and Stone Lakes in California; Camas, Deer Flat, and Kootenai in Idaho; Desert in Nevada; and Little Pend Oreille, Mid-Columbia, NW Hatcheries, and Turnbull in Washington. The conference was held at the Rogue Regency, located at 2300 Biddle Road in Medford, Oregon. The conference spanned three days; Friday, June 14 through Sunday, June 16, 2018.

The weekend agenda included sharing and introductions from each Refuge attending and a workshop on “Telling your Refuge Story” led by professional story-tellers from Portland Story Theater. There were also sessions on Social Media Tools for Friends groups; Success stories and Mentoring programs, and what is “Advocacy”. One evening was devoted

to meeting with the staff of the National Wildlife Refuge Association staff persons, and a discussion on what was learned from the Friends of Malheur Refuge, by the group’s President. The group spent another afternoon on discussions about Board recruitment strategies and Board diversity. The workshop attendees also had an opportunity for a field trip to the National Fish and Wildlife Forensics Laboratory in Ashland, Oregon. For me, it was a first chance to meet other Friends and see the similarities among many groups and, especially, to hear about their concerns and successes.

Our Complex of Refuges Friends’ groups were well represented. The 3 representatives decided that it would be good for the Boards of our three organizations to meet once a year and to rotate meeting sites each year. The invitation has come to the Friends’ Boards to gather in September at Kootenai NWR. We look forward to a chance to meet and share concerns and enjoy a visit with other Refuge Friends. More information will be available shortly.

Refuge Happenings

by **Sandy Rancourt**
Visitor Services Manager

Our spring was packed with many activities in support of our Refuge's goals and mission. Here's what's happening at the refuge.

Floods, Flowers and Feathers Festival & MayFest

Turnbull National Wildlife Refuge celebrated its 7th year hosting the Floods, Flowers & Feathers Festival on Saturday, May 12. (S. Rancourt)

For the past 3 years we have partnered with Downtown Cheney MayFest to host our 2 festivals on the same day. This has been a very successful collaboration. The MayFest committee provides an ideal spot in downtown Cheney for the refuge and our partners' information and activity booths allowing for a great deal more exposure and fun for all. MayFest coordinator, Debbie Anderson, reported 1,100 attendees on May 12th at MayFest alone. Our partners in town were kept very busy providing the public with information and hands-on activities in many different conservation subject areas. Inland Northwest Wildlife Council (INWC) built 110 bluebird nest box kits out of cedar donated by Ziggy's in preparation for the day's event. The INWC also provided the tools and materials for the public to construct their own bluebird box to keep. Council members were so busy, no one could look up to get their picture taken. Spokane Carvers engraved the boxes for folks

after they were built. EWU snyamncut residential hall did a popular flower pot painting activity, and EWU Biology Dept. hosted a booth on sticklebacks, an invasive fish species that is unfortunately plaguing the Refuge. The West Plains beekeepers brought their impressive bee displays, USFWS Ecological Services returned with their booth on endangered species, Duck's Unlimited provided an assortment of great handouts and information and the WA Dept. of Fish and Wildlife hosted a private lands booth. Friends of Turnbull and Ice Age Floods Institute-Cheney-Spokane Chapter hosted information booths with neat giveaways, and Turnbull returned with its very popular animal track booth.

Those activities requiring a more natural setting were held at the refuge. Several hundred folks of all ages enjoyed a day packed with a variety of activities at Turnbull. Folks enjoyed going on bird, flower and mammal walks and participating in a songbird banding demonstration. They also had opportunities to catch aquatic invertebrates in a pond, get a close up look at live raptors, learn about bluebirds, and power shoot cones down with a fire hose. Many people participated in a dragging activity for ticks and learned about soil critters. Other activities included an Ice Age Floods Institute geology tour, a photography talk and demonstration, and a well-received "Can You Find that Bird?" scavenger hunt.

Many thanks and deepest appreciation to all our great partners and for those who worked tirelessly behind the scene for another successful year. Special thanks to Joanne Powell for all her help once again!

Riparian Restoration

After many years of hosting spring and fall plantings and working with groups throughout the years on a multitude of other riparian restoration projects, all of our labor are yielding incredible results. The majority of the riparian restoration sites are now self-sustaining. Areas once devoid of riparian habitat are flourishing and an incredible diversity of songbirds and other wildlife have moved in. Although we will continue to plant in old and new areas, including this fall's community planting event, we are now at the stage where we are removing individual hardware cloth cages from "trees". Species including hawthorne, wild rose, dogwood that now have bark thick enough to deter those pesky voles are having their individual hardware cloth cages removed. Species preferred by beaver including aspen, cottonwood and willow will still have a large protective cage around them, but the inner hardware cloth cage is being removed. We have been removing hardware cloth cages from trees for the past few years, but a great deal was accomplished this spring with the help from University of Idaho (UI) Backcountry Hunters and Anglers (BHA) Club and Fairchild Air Force Base/ALS.

To help us celebrate Earth Day, the UI BHA Club and BSA Troop 381 worked on 2 different riparian restoration projects at the refuge on Saturday, April 21st.

We spent the morning working with UI BHA Club at the Collin Leach Memorial Riparian Restoration Site and the rest of the day at Environmental Education (EE) Outdoor Study Site #4. Protective fencing was repaired at the Memorial Grove and 35 hardware cloth cages were removed from individual trees to improve their growth. EE study site 4 needed a lot of work to make it more presentable and functional. Hardware cloth cages were removed down by the shelter and 10 large cages were installed around surviving aspen trees.

It was a lot of hard work releasing some of the willow trees at EE study site #4.
(S. Rancourt)

Erecting larger cages at EE study site 4. (S. Rancourt)

UI BHA Club members after a hard day's work. (S. Rancourt)

Meanwhile back at headquarters... Eagle Scout candidate Austin Passey and BSA Troop 381 members were busy working on another riparian restoration project. Austin chose a potting project to complete the volunteer component of his Eagle Scout badge. He and his group potted over 600 native aspen and red-osier dogwood bare root seedlings. In addition, his troop weeded the established potted plants in the nursery. Austin and his troop did a great job on the project, and the seedlings are growing out nicely.

Eagle Scout candidate Austin Passey lining out troop members on the weeding aspect of his project. (S. Rancourt)

Austin's finished potting project. (S. Rancourt)

Ethan Plaster's Eagle Scout Project

On Saturday, May 26th, Eagle Scout candidate Ethan Plaster from BSA Troop 324 completed the potting project by potting the remaining 700 bare root seedlings. Ethan recruited 30 individuals to complete this project. Ethan did a great job organizing his troop and lining out members on the project. The BSA Troop worked diligently until all the elderberry and willow seedlings were potted. It is very important to complete the potting projects early before the hot weather arrives and timing of both potting projects ensured high seedling survival.

Ethan lining out the project for BSA members. (S. Rancourt)

The huge pile of potting soil was gone after the completion of the 2 Eagle Scout projects. (S. Rancourt)

Fairchild Air Force Base
Airman Leadership School (ALS)

On June 9th, Staff Sgt. Jonathan Alessie, 92nd FFS Airman Leadership School (ALS) instructor, brought 36 ALS students to do a service project for Turnbull. The ALS program is a 5-week course designed to prepare airmen to be outstanding professional leaders and supervisors. We have worked with the ALS in the past on projects planting milkweed and native saplings, so we were thrilled they wanted to return. Just like their last project it was another cool, rainy day. Rain is always wanted and needed for the habitat, but the tall, dense reed canary grass got everyone soaked and really put all their waterproof boots to the test. I heard one gentlemen say he never had his socks soaking wet before. As I mentioned previously, we have a lot of trees that need to come out of their cages, so this was a perfect job for this hard working group, and work they did! The group removed “242” marked hardware cloth cages from individual trees and installed larger protective cages around the aspen, willow and cottonwood trees in the Pine Creek Riparian Restoration Unit. We started just below Windmill Pond in Section 1 of the stream reach and worked our way west. In just a few hours the group made it all the way through section 9.

Getting ready to pot the remaining 700 bare root seedlings. (S. Rancourt)

Dedicated troop members ensured all plants were potted correctly. (S. Rancourt)

Carefully watering each potted seedling is the final step of the project. (S. Rancourt)

...and they have already requested another project. FAFB ALS (S. Rancourt)

Soaked but having fun on the project. (S. Rancourt)

Traversing the grasses and boulders to get to site B. (S. Rancourt)

Accessing the hardware cloth at the base of a larger tree was not always an easy task. (S. Rancourt)

"Don't go into the long grass"! (S. Rancourt)

Airmen students replaced the marked hardware cloth cages from aspen with larger protective fencing. (S. Rancourt)

The end result. (S. Rancourt)

snyamncut Fundraiser

In May, snyamncut hosted a fundraiser in support of Turnbull NWR. This EWU residential hall that adopted Turnbull several years ago, has hosted these fundraisers annually. Residential Life Coordinator Madison Tuller presented Turnbull with a \$208 check raised during their “Turn It Up for Turnbull” event in support of the refuge’s riparian restoration efforts. Snyamncut also partnered with Turnbull at the Floods, Flowers and Feathers Festival/MayFest events hosting a popular pot painting activity booth. The staff is very grateful to have such a dedicated partner as snyamncut and for all their efforts and contributions throughout the years.

A toast to the success of the project followed the planting for all their hard work. (S. Rancourt)

Monarchs and Milkweed

Forty-six students and teachers Krista Rollins and Erin Schmidt from Spokane Public Montessori spent a morning on June 12th planting milkweed seedlings and seed. The students brought 50 seedlings they started from seed in their classroom. The Spokane Conservation District provided funding for the plant stand and grow light. Mike Rule, the refuge biologist and I broke the group into 2 and rotated the students between nature walks and the planting project. We had previously presented on Turnbull, pollinators and monarchs to Krista’s middle school class during the winter, and we provided the milkweed seed to get their project started. Krista mentioned the initiative students were taking with this project including learning there should be 4-8 week period between planting the seeds and transplanting them. Despite a rapidly warming morning, the students did a great job planting the seedlings and seed. To ensure survival the seedlings will be watered daily.

Xerces Society Monarch Butterfly Workshop

Turnbull hosted a family-friendly monarch butterfly workshop put on by the Xerces Society in June. Twenty folks attended and were provided a presentation by a monarch researcher from the Xerces Society. After the presentation, the group checked out a couple of milkweed sites along the Refuge’s Auto Tour Route. Unfortunately, the monarchs had not arrived yet, but it was still a very nice day for the public to learn about this important butterfly species and habitat needed to ensure its survival.

Digging is never an easy task even for milkweed at Turnbull, located in the very rocky Channeled Scablands. (S. Rancourt)

EE Study Site 4/ West Blackhorse Lake Trail Restoration

It has been awhile since we had a group out on a trail restoration project, so when Cheney High School science teacher Mary Pratt expressed an interest in a service project for her summer school students, Blackhorse Lake Trail came immediately to mind. I mentioned earlier that this site needed some TLC. After working with the UI BHA Club on the plantings around the EE shelter on that trail in April, it was time to do something about the overgrown trail itself. Maintenance staff mowed the main trail and dumped 3 dump-truck loads of wood chips at the site in preparation for the group. On July 10th 50, 9-12th grade CHS students and several teachers arrived ready to get to work. Anyone who has ever participated in a trail restoration project knows this is no easy task. It takes a lot of hard work and muscle to get the job done which includes loading wheel barrows and dumping chips along a ½ mile trail. The group laid 2, 12 yard dump loads of chips and the trail looks wonderful. Refuge biologist Mike Rule and AmeriCorps members Michael Ploegman and Hans Lohmeyer spent the morning working side by side with the students.

Wheelbarrows are the most efficient and least harmful method of distributing wood chips in this habitat. (M. Rule)

Before and After. (M. Rule)

The finished project. A job very well done. (M. Rule)

In just a few hours, this large pile of wood chips was depleted. (M. Rule)

Environmental Education & Outreach

We had another incredible field trip season. The Field Trip Program was fully booked a few months in advance and was kicked off with CHS in early April. This spring, over 3,400 K-12 students were provided guided nature walks through the 4 habitats found on Turnbull, hands-on aquatic invertebrate activities and in-classroom instruction on Turnbull, National Wildlife Refuge System and animal adaptations. AmeriCorps member Jennifer McGovern, SCA intern Ruby Smith, EE Contractor Kylie Gaard, former AmeriCorps member Colton Hodgson, long term refuge volunteers Joyce Alonso, Chuck Kerkering, Dianne Latta, Sarah Valverde, Linda Long, Jan and Ed Reynolds and Refuge staff Mike Rule and I facilitated field trips for students and tours for seniors. Biological AmeriCorps members Michael Ploegman and Hans Lohmeyer also assisted at festivals and camps. Everyone was kept so busy the Field Trip season was over before we knew it. We lost some great assistance when SCA intern Ruby Smith's 11-week internship ended, but she has already offered to come back and help out occasionally with programs when needed. With students now out of school, we are already well into our summer program. Field trips, youth camps, summer schools, scouts, homeschools, and an occasional senior tour now fill the schedule.

SCA intern Ruby Smith facilitating the aquatic invertebrate component of the field trip. (S. Rancourt)

Outreach

Jennifer Fees from WSU/Spokane County 4H coordinated with Mindy and Clay Poindexter to host a camp at their organic plant and animal farm. They invited youth from FAFB to attend a day living on a farm and enjoying and protecting wildlife. Mindy and Jennifer who are teachers coordinated with six different organizations, and they invited Turnbull to participate at their day camp on June 20th. AmeriCorps members Jennifer, Hans, Michael and SCA intern Ruby Smith staffed our animal tracks and information booth. The team was kept very busy with 9 rotations of 92, K-6 grade students visiting the 6 stations. The Poindexter's provided us with an ideal spot in the shade of their porch so it made a busy day interacting with the students very enjoyable.

A beautiful spring day for a nature walk at Turnbull. (S. Rancourt)

From left to right AmeriCorps members Michael, Jennifer, Hans and SCA intern Ruby. (S. Rancourt)

Celebrate National Wildlife Refuge Week

*with a Community Work Day
at Turnbull National
Wildlife Refuge!*

RAIN or SHINE

Turnbull National Wildlife Refuge, Spokane Audubon Society and Friends of Turnbull will host a community work party on Saturday, October 13, 2018. This is part of an ongoing community effort to restore native riparian habitat to benefit birds and other wildlife species. We have hundreds of native saplings to plant and fencing to erect to protect the trees from deer, elk and moose browsing.

Attention Groups: Please call in advance to register. It helps us in our planning if we know how many are coming. The Refuge will also host a “potluck” lunch. Friends of Turnbull will provide hamburgers, hotdogs and vegetarian alternatives. Please feel free to bring your favorite dish. Ask for Sandy (509) 559-3034.

Planting Time: 9 am to 12 p.m.

When: Saturday, October 13, 2018

Lunch: Potluck 12 p.m. (Friends of Turnbull will supply the hamburgers, veggie burgers and hotdogs)

Where: Turnbull NWR Headquarters, 5 miles south of Cheney on Cheney-Plaza Road: turn left on Smith Road and drive 2 miles on gravel road to headquarters.

Clothing: Long-sleeved shirt, work pants, gloves, sturdy boots or shoes.

Equipment: (If you can) shovels and pliers.

Everyone is Welcome!

Friends of Turnbull NWR
P.O. Box 294
Cheney, WA 99004
